

ROHIT JAYSHEEL DIGGI

B.Tech. (Hons.) CSE - AI & ML, RV University

Bengaluru, Karnataka | rohitdiggi@outlook.com | +91-8861502347 | Website | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Final-year B.Tech (Hons.) CSE (AI/ML) student building agentic AI systems, full-stack applications, and networking research, with several projects deployed live and in active use. I pick the architecture to fit the decision: parallel LLM agents where a call needs real judgment, deterministic pipelines where it needs to be reproducible and auditable. Currently a Research Assistant studying next-generation intra-AS routing protocols on the FABRIC testbed under faculty guidance. Actively seeking SDE / AI Engineering roles.

EDUCATION

RV University - B.Tech. (Hons.), CSE (Artificial Intelligence & Machine Learning)

2023 - 2027

CGPA: 8.06 / 10

EXPERIENCE

Research Assistant - EIBP Protocol, Rochester Institute of Technology (Remote)

Feb 2026 - Aug 2027

- Researching EIBP, a next-generation intra-AS routing protocol built on MNLR, under Prof. Nirmala Shenoy; benchmarked against OSPF for failure detection speed and control overhead.
- Deployed and validated the protocol on the FABRIC national research testbed, running the first successful 13-node experiment and measuring convergence time, failure recovery, and control overhead.

Cybersecurity Intern, RV University

Jun - Jul 2025

- Built an anomaly-detection pipeline combining Random Forest, Isolation Forest, entropy filtering, and Bloom filters, with a live traffic-simulation dashboard in Dash/Plotly.
- Co-authored resulting work into a paper accepted at an international conference (SWSIoT-2025, in association with Springer).

PROJECTS

Multi-Signal Risk Assessment - Parallel Agentic AI System

Apr 2026

Relevance AI, Agentic AI, Workflow Orchestration | Live Demo: prism-risk-rho.vercel.app

- Designed a four-agent parallel system (Description, Location, Historical Claims, Safety) that evaluates risk signals simultaneously and aggregates them into a final classification.
- Built conflict-resolution logic to reconcile contradictory agent outputs with explainable justifications and confidence scores.

AI Boardroom - Multi-Agent Startup Idea Evaluator

Jul 2026

Agentic AI, LLMs, Multi-Agent Orchestration | Live Demo: aiboardroom-seven.vercel.app

- Built a solo multi-agent system simulating a boardroom of 9 AI personas (CEO, VC-Skeptic, Security Lead, and 6 more) that debate a submitted startup idea from distinct viewpoints.
- Designed the orchestration layer to synthesize each agent's critique into a single scored verdict with reasoning.

Satark.ai - Agentic Honeytrap API for Scam Detection

Jan - Feb 2026

GPT-4.1-mini, Node.js, Express, Agentic AI | Top 8 nationwide, HCL GUVI AI Impact Summit 2026 | Live Demo: adaptive-honeytrap-agent.vercel.app

- Built a conversational AI agent that engages scam callers to extract phone numbers, bank details, and tactics using custom "Bridge Logic" prompt engineering to maintain cover while extracting intel.
- Shipped as a modular Node.js/Express API with separate detection, extraction, and engagement logic; deployed live on Railway.

BhashaBuddy - AI Language-Learning Platform for NRI Children

Dec 2025 - Feb 2026

React, Vite, Supabase, OpenAI API, Text-to-Speech | Live Demo: parampara-one.vercel.app

- Built a full-stack platform teaching NRI children their native language through interactive lessons, using OpenAI's API for conversational practice and TTS for pronunciation feedback.
- Shipped with Supabase auth/progress tracking and an active live user base on Vercel.

TECHNICAL SKILLS

Languages: C, Python, Kotlin, JavaScript, TypeScript | **AI/ML:** LLM Integration, Prompt Engineering, RAG, Agentic AI | **Backend:** FastAPI-ready Python, Node.js/Express, REST APIs, PostgreSQL/Supabase, SQL, JSON/JSONB | **Tools:** Git, Android SDK

ACHIEVEMENTS

- Co-authored a paper on real-time DDoS detection using ML and entropy analysis, accepted at SWSIoT-2025 (Springer).
- 1st Prize for "Traffic Management System" at Avishkar, an inter-college exhibition (ISTE/IEEE).

CERTIFICATIONS

Affective Computing - NPTEL (90/100) | Software Testing - NPTEL
